

**Supplementary Figure S5.** Prediction vs. observation of PD model. **(a)** Plasma SDMA profile expressed as percentage of baseline across the treatment duration and **(b)** platelet count across the treatment duration.

Solid lines represent observed results (including observations after dose interruption/reduction). Dashed lines represent the median and the gray shaded area represent 5th and 95th percentile of 1000 simulations with continuous dosing.  
 BID, twice daily; PD, pharmacodynamic; QD, once daily.
